Appendix 86

INTRODUCTION

This Annual Planning Information Report for fiscal year 1986 is compiled for use primarily by socioeconomic planners. It contains a wide range of information on the population, employment, occupations, and socioeconomic characteristics of the people of Idaho. The planning report includes data for the state's six planning areas (see Figure A) as well as the statewide numbers. Data for Ada County (Boise City MSA), which is Idaho's only Metropolitan Statistical Area, are also included in many of the tables.

Description of Area

Idaho is located in the northwestern United States. It is bordered by Washington, Oregon, Nevada, Utah, Wyoming, Montana, and Canada. It is a sparsely populated state with varied terrain of sagebrush prairie and forested mountains. The Clearwater, Salmon, Lost River, and Bitterroot Mountains are among the mountain ranges within the state's borders. Major rivers in the state include the Salmon, Clearwater, and Snake Rivers. The rugged beauty of the land and the easy access to many outdoor activities such as boating, skiing, hunting, and fishing have helped to make tourism and recreation a large and growing industry in the state.

Idaho has traditionally been an agricultural state, but recent years have seen manufacturing, especially electronics, rapidly gaining in economic importance. Livestock, especially cattle, is important to the economy. Major crops grown by Idaho's farmers include peas, alfalfa seed, Marion Kentucky Bluegrass seed, and 'famous' potatoes. Major manufacturing industries

include food processing, forest products, phosphate processing into fertilizer, and electronics manufacturing. Mining has played an important role in the development of the state, with phosphate rock, silver, lead, and zinc among the resources being mined. A recent addition to the mining industry in the state is the Cyprus Thompson Creek mine in Custer County, where molybdenum is mined by means of an open-pit operation. Economic conditions of the last few years have caused a reduction in the importance of other types of mining to the state's economy.

Boise MSA

There is only one Metropolitan Statistical Area (MSA) in Idaho. An area qualifies for recognition as an MSA in one of two ways: if there is a city of at least 50,000 population, or an urbanized area of at least 50,000 with a total metropolitan population of at least 10,000. The Boise City MSA consists of all of Ada County and is located in the southwestern part of the state. It has the largest population of any county in Idaho. Boise is the capital city of the state and is a center of activity for business and government. Like the rest of the state, Ada County has a mild climate and experiences four definite seasons each year. Although Boise City itself is lush with trees and the Boise River, the surrounding area is naturally desert-like and farmers must rely heavily on irrigation to maintain their crops.

Highlights

Idaho's economy continues to be influenced to a great extent by the national economy. As the national economy continued to improve in 1984, so did Idaho's, though there is a lag time between. The lumber and wood products industry grew only slightly in 1984. Hard times continue to plague Idaho's timber industry. Higher than desired interest rates, less expensive imported lumber, and an abundance of cut lumber have tended to dampen the rebound the industry experienced in 1983. The fastest growing industry in the state in 1984 was the manufacture of electrical and electronic equipment and supplies. The food and kindred products industry rebounded in 1984 following a sluggish year. A stronger economy resulted in improved demand for Idaho's food products, especially its processed potatoes. Construction activity continues to be hampered by high interest rates, a situation that is not expected to improve much in the near future.

The labor force is expected to be 427,800 statewide in 1986. This is a 1.0 percent drop from the 432,033 total labor force in 1980, and 0.3 percent below 1984's preliminary annual average labor force of 429,155. The unemployment rate in 1986 is projected to be 6.7 percent, up slightly from the 1984 preliminary annual average of 6.3 percent.

There was a 32.5 percent increase in Idaho's population between 1970 and 1980. Idaho's population is projected to further increase by 8.9 percent over the 1980 Census of Population by 1986. The 1986 population is expected to reach 1,027,717.

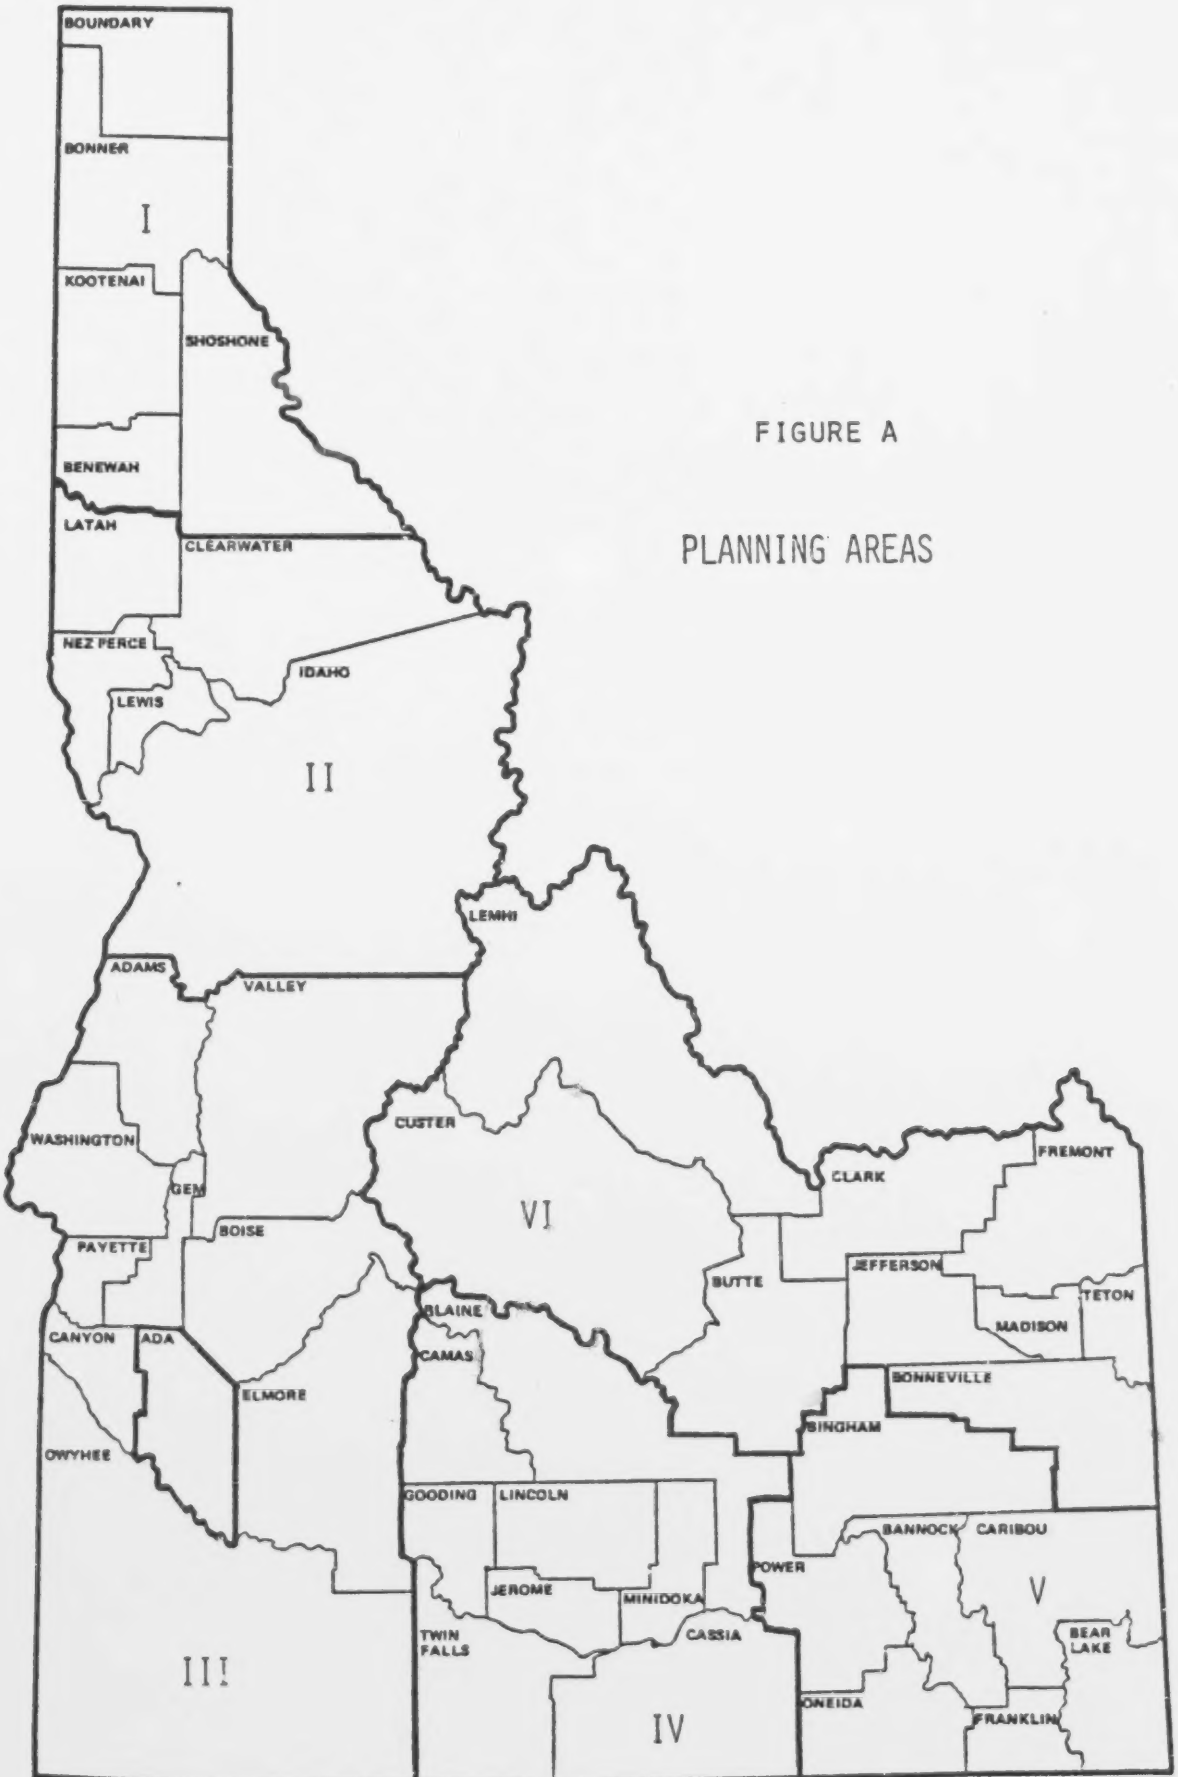

FIGURE A

PLANNING AREAS

Population

The population projections in this report were developed by the Research and Analysis Bureau. Data from the 1980 census, 1983 census projections, survival rates from the Bureau of Labor Statistics, and Idaho birth rates were used in making these projections. See Appendix for further detail.

Idaho's population continues on a gradual increase. Idaho's 1986 projected population is 1,027,717, an 8.9 percent increase over the 1980 census total.

According to the Bureau of Financial Management, Idaho's 1983 birth rate was 19.2. This rate is 23.9 percent higher than the 1983 provisional national average of 15.5. The estimated fertility rate for 1983 based on 1980 census population of females age 15-44 was 87.3 live births per 1,000 women. This is a decrease from the 1982 rate of 91.2.

TABLE 1 gives total male and female population for each county and area within the state. TABLE 2 lists detailed age breakouts for the state and all six planning areas. TABLE 3 presents data for the population 16 years old and older broken out by sex within each planning area and the state. TABLE 4 shows county populations by age groups 16 years and older. TABLE 5 gives projected race/ethnic group totals for each county.

* DATA SUPPRESSED BY CENSUS BUREAU

Labor Force

To be considered in the labor force, a person must be at least 16 years of age and either employed or unemployed and looking for work. The term 'Civilian Labor Force' excludes members of the armed forces. The Department of Employment deals primarily with the Civilian Labor Force. The projected county labor force data was estimated using the 1984 annual average labor force data for each county. A ratio between the county annual average labor force and the statewide labor force for 1984 was developed and applied to the projected 1986 statewide labor force. The sex, age, and racial breakouts of labor force were derived by applying the 1980 Census ratios to the 1986 projected labor force data. The area data are sums of the data for counties which make up the areas.

The statewide labor force is projected to be 427,800 in 1986. This is a 1.0 percent drop below the 1980 labor force of 432,033. TABLE 6 lists data for the 1986 projected labor force by sex for counties, areas, and the state. TABLE 7 gives a county breakdown of labor force by age. TABLE 8 projects the labor force by age and by totals within the areas. TABLE 9 presents the projected 1986 labor force by race for the same areas. Because of census suppression of county data for some races, the data in this table are presented in only white and non-white classifications. TABLE 10 presents statewide data for labor force by race and sex. Projected 1986 labor force by race/ethnic group within county is shown in TABLE 11.

* DATA SUPPRESSED BY CENSUS BUREAU

Unemployment and Unemployment Rates

The projections for county unemployment were made using the 1984 annual average unemployment data for each county. A ratio between the county annual average unemployment and the statewide unemployment for 1984 was developed and applied to the projected 1986 statewide unemployment total. The sex, age, and racial breakouts of unemployment were derived by applying 1980 census ratios to the 1986 projected number of unemployed. The area data are sums of the data for the counties which make up the area.

The total number of unemployed in Idaho for 1980 was 28,283. The projection for 1986 is 28,600, a 1.1 percent increase. The unemployment rate is expressed as a ratio of the number of persons unemployed to the number of persons in the labor force as a whole. The projected 1986 unemployment rate for Idaho is 6.7 percent of the labor force.

TABLE 12 lists unemployment by sex for 1986 for each county, area, and the state. TABLE 13 shows unemployment by county broken into age groups.

Projected unemployment by age group by area is presented in TABLE 14. TABLE 15 lists projected unemployment by race within area; the racial breakdowns are white and nonwhite due to census data suppression. TABLE 16 shows statewide numbers of unemployed by race and sex. Projected 1986 unemployment by race/ethnic group within county is presented in TABLE 17.

TABLES 18 and 19 present projected 1986 unemployment rates by age and sex within area. Statewide and Ada County rates are also given in each of these tables. The Idaho Department of Employment calculates the monthly unemployment rates shown in TABLE 20A. This series is designed for use in tracking economic trends and is seasonally adjusted. The data shown

in TABLE 20B is calculated using the same data base and adjusted to the Current Population Survey. Those data are not designed to be an economic series and are not seasonally adjusted. TABLE 20B should be used in the allocation of federal revenue.

Note: These data have been adjusted to the Current Population Survey and should be used in the allocation of federal revenue. They are not designed to be an economic series and are not seasonally adjusted.

Characteristics of UI Claimants

Tables in this section present data on the characteristics of those persons who filed for Unemployment Insurance benefits with the Department of Employment during 1984. The data presented is based on a 20 percent sample of claimants who were surveyed after filing their claims.

TABLE 21 presents area totals of UI claimants by race, as well as the total number of claimants in each area. TABLE 22 shows the highest level of schooling attained by the claimants. Nonresponse to this question was relatively high, hence the large number of claimants in the INA category. TABLE 23 presents area specific data on UI claimants by sex and by duration of their unemployment. Many of the 0 weeks claimed shown in this table and in TABLE 26 represent people who were found to be ineligible for Unemployment Insurance benefit payments. Many of these claimants were people who filed for extended benefits but who were required to file for regular benefits to determine their eligibility before filing for extended benefits.

TABLE 24 lists claimants by the industry of the claimant's principal employer prior to filing for UI benfits. UI claimants broken out by age and sex within areas are listed in TABLE 25. TABLE 26 presents area data on the percentage of claimants by duration within industry of the claimant's principal employer. From this table, one can get an idea of which industries tended to produce long or short term unemployment. Once again, the category of 0 weeks claimed contains many people who were found to be ineligible for UI benefits, as well as some who were required to file for regular benefits before filing for extended benefits.

TABLE 27 shows area specific data on claimants' occupations and industry of their principal employers. The data is expressed as a percentage of the occupational categories.

The final table in this section is not derived from the same data base as the others. TABLE 28 lists statewide annual averages of unemployed persons by reason for unemployment for the years 1977 through 1983. This data is compiled by the Bureau of Labor Statistics and is published in Geographic Profile of Employment and Unemployment.

TABLE 21

Occupational Information

TABLE 29 presents calendar year 1983 annual average employment by industry and county for employment covered by the Idaho Employment Security Law. This data is also compiled and published quarterly; similar data is published annually by the Department of Employment in its booklet Basic Economic Data for Idaho.

TABLE 30 lists 1980 census information on class of worker by county. This is followed by three tables of 1980 census occupational information. TABLE 31 gives a breakout of major occupations by area. TABLE 32 presents the same type of information by county. These two tables include only those persons who were employed at the time the census was taken. TABLE 33 lists occupational data for the state broken out by race and sex. The totals on this table are higher than those for the two previous tables because they include data for those persons who were unemployed at the time the census was taken, but who listed their most recent occupation if they had worked in the previous five years.

*Because Hispanic is not a racial category, it will not add into the total.

Socioeconomic Characteristics

The 1980 Census of Population is the most current source for much of this type of information. Included in this section is information on income, poverty, wages, and welfare recipients.

Mean and median income for households, families, and unrelated individuals by county is presented in TABLE 34 This is 1979 income data, which was collected along with the 1980 Census of Population. TABLE 35 gives Idaho personal income by major sources for the years 1981 through 1983. Personal and per capita income by county for the years 1980, 1981, and 1982 are presented in TABLE 36.

Annual Wages in Idaho (TABLE 37) lists calendar year total wages paid by industry by county in 1983. Total wages paid during the year by employers covered under Idaho's Employment Security Law are listed in this table. This information is also compiled and published on a quarterly basis by the Department of Employment. TABLE 38 gives the average hourly salaries for selected occupations in Idaho. This information is taken from the Idaho Occupational Wage Survey, which presents the results of an annual wage survey conducted by the Department of Employment. That publication includes similar data by industry and region.

TABLE 39 gives high school enrollments and drop outs for the years 1980 through 1986. Drop outs for 1985 and 1986 and enrollment for 1986 were estimated from previous years' data. Data in this table are for secondary schools, that is, grades 7 through 12.

TABLE 40 presents data on the 1986 projected number of economically disadvantaged persons by county by age group. This table is based on information provided by the U.S. Department of Labor from the 1980 census. The information presented in TABLES 41 and 42 are the most current standards for poverty level and the 70% of lower living standard income level. TABLE 43

lists projected persons below poverty by race and county for 1986. Because of Idaho's relatively small population, some of the racial data has been suppressed.

TABLES 44 and 45 present fiscal year 1984 annual average data on public assistance recipients and food stamp activity by area. Data for these tables, as well as for TABLE 46, were provided by the Idaho Department of Health and Welfare. TABLE 46 gives statewide data on the age and sex of persons receiving public assistance by program. The data presented in this table are tabulated as of February 1985.

TABLE 47 lists civilian veterans in the state by period of service by county and is 1980 Census of Population data.

TABLE 48 gives statewide and area data on disadvantaged and displaced applicants by sex and age. TABLE 49 presents disadvantaged and displaced applicants by age and education. Data for these tables is collected at local Job Service Offices. Because the selection process is based simply on those members of the labor force who choose to list themselves with Job Service, the system is not a representative sample of the Idaho labor pool. If this limitation is kept in mind, however, the level of detail can be useful in trying to form an image of Idaho's labor force.

TABLE 34

INCOME IN 1979 - IDAHO 1980 CENSUS

COUNTY	Households		Families		Unrelated Individuals 15 Years Old and Over	
	Median	Mean	Median	Mean	Median	Mean

Employment Service Automated Reporting System (ESARS)

The final section of this report is a copy of the latest Department of Employment ESARS Statewide report. This report is a matrix of information concerning job applicants on file at local Job Service offices. Because the selection process is based simply on those members of the labor force who choose to list themselves at a Job Service office, the system is obviously not designed to be a representative sample of the Idaho labor force. If this limitation is kept in mind, however, the level of detail can be useful when trying to form an image of the Idaho labor pool. One must understand that the data on the Matrix (TABLES 49A to 49D) are not accumulated totals, but a record of those applicants on the file as of June 30, 1984.

TABLE 48 below gives some accumulated totals for program year 1984 taken from ESARS Table 91. Program year 1984 extends from October 1, 1983 until June 30, 1984. Due to a federal change of definition, 1984's program year was nine months long. This should be kept in mind when using the accumulated totals shown in TABLE 48.

TABLE 50

ESARS

Applicants Active At Any Time PY 1984 - Statewide

(October 1, 1983 — June 30, 1984)

Total Applicants	120,426
Handicapped	3,647
Veterans	20,082
Total UI Claimants	50,347
Minority	9,204
Female	51,527
Econ. Disadvantaged*	15,585

APPENDIX

Methodology and Data Sources

The Department of Employment's projected 1986 population for Idaho is the basis for much of the information presented in this report. The following data was utilized in making the 1986 Idaho population projections:

1980 Census of Population - Bureau of the Census

1981, 1982 Population Estimates - Bureau of the Census

1983 Idaho Population Estimate - Bureau of Vital Statistics

1980, 1981, and 1982 County Birth Rates - Bureau of Vital Statistics

1983 Birth Rates (carried through 1986) - Bureau of Vital Statistics

3-Year Survival Rates - Bureau of Labor Statistics

The 1980 census population by age for each of Idaho's counties was the starting point. Three-year survival rates were applied to the census population to estimate deaths; 1980 through 1983 birth rates were applied to estimate births. This 'survived' 1983 population total was then adjusted to match the 1983 population estimate. This 1983 population was projected through to 1986 using the same three-year survival rates and 1983 birth rates to produce 1986 population projections by age within county.

The following section will give a short explanation of sources and methodology for the information contained in this report. Further information concerning methodology may be obtained from some of the source agencies. Each entry refers by table number to a table or tables in the text.

Tables 1 through 5	1986 projected population by age within county (see previous page for methodology) was apportioned according to 1980 Census of Population. Ratios of sex and race/ethnic groups to total county population were developed and applied to the 1986 population projections. County data was totalled to the area level for tables presenting area data.
Tables 6 through 19	The Department of Employment estimated 1986 Labor Force and Unemployment for Idaho. County 1986 labor force was estimated using the 1984 annual average labor force data for each county. A ratio between statewide and county labor force for 1984 was developed and applied to the projected 1986 statewide labor force. The sex, age, and racial breakouts of labor force were derived by applying the 1980 census ratios to the 1986 projected labor force data. Unemployment rates are calculated by dividing total unemployment by total labor force.
Tables 20A and 20B	Idaho Department of Employment calculates the monthly unemployment rates shown in Table 20A. This series is designed for use in tracking economic trends and is seasonally adjusted. The data shown in Table 20B are calculated using the same data base and are adjusted to the Current Population Survey. Those data are not designed to be an economic series and are not seasonally adjusted. Table 20B should be used in the allocation of federal revenue.
Tables 21 through 27	The Continuous Wage and Benefit History (CWBH) survey, a 20 percent sample of persons who filed for Unemployment Insurance benefits, was used to build the data base from which the information for these tables was taken. The survey is done by the Research and Analysis Bureau of the Department of Employment.

Table 29	Idaho Department of Employment. Note this data is for only those workers covered under Idaho's Employment Security Law.
Tables 30 through 34	1980 Census of Population, Bureau of the Census, U.S. Department of Commerce.
Table 35	U.S. Department of Commerce, Survey of Current Business, August 1984, Volume 64, Number 8.
Table 36	Bureau of Economic Analysis, U.S. Department of Commerce.
Table 37	Idaho Department of Employment. See note regarding Table 29.
Table 38	Idaho Occupational Wage Survey, November 1984, Research and Analysis Bureau, Idaho Department of Employment.

Table 39	The Idaho Department of Education provided 1980-1985 enrollment totals and 1980-1984 total dropouts for secondary schools (grades 7 through 12). Enrollment for 1986 was estimated by subtracting 12th graders and adding 6th graders to the 1985 enrollment totals. Dropouts for 1985 and 1986 were estimated by applying an average percentage change in dropouts over the years 1980 through 1984.
Table 40	1986 projected population by county was apportioned using 1980 Census of Population ratios.
Tables 41 and 42	Idaho Department of Employment JTPA Procedures Manual and Federal Register, Volume 49, Number 154, August 8, 1984.
Table 43	Total persons below poverty in each county was estimated based on the ratio of total county population to persons below poverty in the 1980 Census of Population. Race/ethnic breakouts were estimated based on ratios of each race/ethnic category to total persons below poverty in each county.
Tables 44 through 46	Research and Statistics Unit, Division of Welfare, Idaho Department of Health and Welfare.
Table 47	1980 Census of Population, Bureau of the Census, U.S. Department of Commerce.
Tables 48 and 49	The Idaho Department of Employment's National System Data Base Interface (NSDBI) file is a data base of applicant characteristics collected at local Job Service Offices. The data is the same as that used in the ESARS system and is not a representative sample of Idaho's population or labor force. It can be useful as a tool if this limitation is kept in mind.
